Self-propelled vacuum is a type of vacuum cleaner that is designed to move on its own, without the need for the user to push or pull it. This type of vacuum typically uses motorized wheels or a motorized brush roll to move across the floor, while the user simply guides it in the desired direction. There are several advantages to using a self-propelled vacuum. First, it can reduce the physical strain on the user, especially if they have back or mobility issues. Second, it can make vacuuming faster and more efficient, as the user can focus on directing the vacuum rather than pushing it around.
