Abstracts

A personal fall limiter is essentially a compact, lightweight self-retracting lifeline that has a relatively short working length, typically six to nine feet. What makes the device “personal” is that the body of the retractable unit can be attached directly to the back D-ring on a worker’s full-body harness and can be carried on the worker’s back. This “reverse configuration” offers an advantage over many standard self-retracting lifelines, which must be secured at the anchor point.

This report studies the global Self-Retracting Personal Fall Limiter (PFL) production, demand, key manufacturers, and key regions.
