Abstracts

The global Self-Service Film Retrieval Machine market size is expected to reach \$ 4553 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Self-service film retrieval machines are intelligent self-service devices in medical institutions used by patients to collect medical imaging films and related examination reports independently. By integrating with the hospital's information system, they enable functions such as identity verification, image data matching, and automatic film output or retrieval, reducing the workload of manual counters and improving efficiency and patient experience.

In 2025, global sales of self-service film retrieval machines reached 128,000 units, with a production capacity of 160,000 units, an average selling price of US\$26,000 per unit, and an average gross profit margin of 35%-45%.

The upstream core hardware of self-service film retrieval machines includes medical dry film printing engines, industrial control motherboards, touch display modules, identity verification modules, and medical dry films. Software and hardware components include DICOM image protocol processing and image rendering/layout algorithms. Midstream core processes include overall machine design, hardware integration, software development, system integration (PACS/RIS/HIS), and testing and certification. Downstream applications are mainly in general hospitals, specialist clinics, primary healthcare facilities, and health checkup centers.

This report studies the global Self-Service Film Retrieval Machine production, demand, key manufacturers, and key regions.
