The global Self-Service Medical Record Printer market size is expected to reach \$ 1046 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Self-service medical record printers are intelligent devices in medical institutions used by patients to independently print medical records, examination reports, laboratory test results, or other relevant documents. They are typically self-service devices integrating hardware terminals, software systems, and hospital information system interfaces, enabling secure, fast, and automated printing of medical records and reports, reducing queues at manual service windows, and improving hospital operational efficiency and patient experience. In 2025, global sales of self-service medical record printers reached 84,000 units, with a production capacity of 130,000 units, an average selling price of US\$8,500 per unit, and an average gross profit margin of 30%-40%. The upstream core components of self-service medical record printers include printing engines, touch display modules, identity verification modules, and control and computing modules. The midstream core links include overall machine design, structural development, hardware integration and testing, and software development and system integration. Downstream applications are mainly in general hospitals, specialist clinics, primary healthcare facilities, and health checkup centers.
