## Abstracts

A Self-Supporting Storage System, often referred to as a silo storage system, is a type of storage facility where the storage racks themselves support the building structure. Unlike traditional warehouses where the building structure supports the racks, in a rack-supported warehouse, the racks are integrated into the building's structural framework. This design maximizes storage capacity and operational efficiency by utilizing the vertical space more effectively.

According to our (Global Info Research) latest study, the global Self-Supporting Storage Systems market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
