According to our (Global Info Research) latest study, the global Self-Winding Yarn Throwing Robot market size was valued at US\$ 807 million in 2024 and is forecast to a readjusted size of USD 1267 million by 2031 with a CAGR of 6.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The self-winding yarn-dropping robot is an intelligent device used in the textile industry. It can automatically complete yarn winding, splicing, cleaning, transportation and delivery operations. Through sensors and automatic control systems, autonomous yarn-throwing robots can identify yarn status, handle broken yarn joints, and automatically transport yarn bobbins to designated locations to achieve continuity and efficiency in textile production. The robot significantly improves production efficiency and yarn quality consistency, reduces manual intervention and labor intensity, and is widely used in spinning, weaving, clothing manufacturing, home textile and other industries, promoting the automation process of the textile industry.

Autonomous yarn-casting robots lead the trend of intelligent manufacturing in the textile industry, promoting the dual improvement of production efficiency and product quality. Traditional textile production relies on a large amount of labor, but the application of self-winding yarn-throwing robots has significantly reduced labor costs, reduced human errors, and ensured the consistency of yarn quality. By automating complex operations such as winding, splicing and handling, this robot not only optimizes the production process, but can also monitor the yarn status in real time to achieve intelligent

management of the production process. As the textile industry's demand for automation and intelligence grows, autonomous yarn-throwing robots will become more popular and become an important tool for textile companies to enhance their competitiveness.
