Abstracts

The global Selicrelumab market size is expected to reach \$ 122 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

In 2025, global Salliximab production reached approximately 100,000 units. Salliximab is a novel fully humanized anti-interleukin-17A monoclonal antibody. It specifically binds to and neutralizes the pro-inflammatory factor IL-17A in the human body, inhibits abnormally activated inflammatory responses, and blocks the pathological progression of autoimmune diseases. Featuring a precise targeted mechanism and remarkable anti-inflammatory efficacy, this drug is mainly clinically applied to autoimmune inflammatory diseases such as psoriasis and ankylosing spondylitis. It demonstrates favorable safety and tolerability, offering a new targeted treatment option for patients with autoimmune disorders and further enriching the layout of innovative drugs in the domestic rheumatology and immunology field.

Selicrelumab represents a promising investigational CD40 agonist monoclonal antibody targeting immune activation for solid tumor immunotherapy. As a key player in the emerging class of immunostimulatory antibodies, it is being evaluated across multiple advanced malignancies, both as monotherapy and in combination with chemotherapy, checkpoint inhibitors, and other immunotherapeutic agents. Its mechanism of action—driving antigen-presenting cell activation and enhancing T-cell-mediated antitumor immunity—positions it as a potential cornerstone of next-generation cancer treatment paradigms. While clinical development continues, the drug faces competitive dynamics from other CD40-targeted therapies and established immunotherapies, alongside evolving regulatory and reimbursement landscapes that will shape its future market positioning.
