Abstracts

According to our latest research, the global Semi Automatic Parking System market size will reach USD 2434 million in 2031, growing at a CAGR of 3.6% over the analysis period.

The semi-automatic multi-story parking garage primarily includes two types of parking equipment: simple lifting and lifting with lateral movement. Simple lifting multi-story parking garages consist of vertical lifting and tilting types. The vertical lifting type typically has 2-3 levels. Its structure is simple and easy to operate, making it widely suitable for both indoor and outdoor parking lots. The cost is relatively low, with a two-level simple lifting system priced around 20,000 yuan, making it feasible for home use as well. Lifting with lateral movement multi-story parking garages are categorized based on their cross-sectional layout into fully above-ground and semi-underground types. The fully above-ground type can have 2-9 levels; however, the higher the number of levels, the longer it takes to access vehicles, so it is generally not recommended to build too high. The semi-underground type typically features one or two underground levels and one to three above-ground levels. The semi-underground design fully utilizes underground space, but it requires relatively higher civil construction investment.
