According to our (Global Info Research) latest study, the global Semi-Automatic Torch market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A semi-automatic torch is a type of welding torch used in semi-automated welding processes. It is designed to be handheld and operated by a welder, but it may also have some automated functions to assist in the welding process. Unlike fully automated welding systems controlled by robots or machines, semi-automatic torch require manual control and guidance from the operator. The operator holds the torch and directs it along the welding path while controlling the welding parameters such as the arc length, voltage, and wire feed speed.
