## Abstracts

The global Semi-Automatic Vacuum Filling Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Semi automatic vacuum filling machine is a kind of equipment used for filling liquid, viscous liquid, lotion and other substances. Its working principle is to extract air from the container through a vacuum pump, creating a certain negative pressure inside the container. Then, the material that needs to be filled is transported to the container through a pipeline, gradually increasing the pressure inside the container, thus achieving the filling process. The semi-automatic vacuum filling machine requires manual placement of the container on the filling machine's workbench and manual initiation of the filling process, but its filling speed is fast and suitable for small and medium-sized production.

This report studies the global Semi-Automatic Vacuum Filling Machine production, demand, key manufacturers, and key regions.
