A semi-dry wetsuit is a type of wetsuit that provides some degree of water resistance. The neoprene material of a semi-dry wetsuit is designed to fit closely to the body, which helps to trap a layer of water between the suit and the skin. This layer of water is then warmed by the body's own temperature, providing insulation against the colder water outside the suit. Some semi-dry wetsuits also incorporate additional features, such as internal seals or external zippers, to further minimize water entry and maximize warmth. Semi-dry wetsuits are commonly used for diving, surfing, and other water sports in colder environments.
