The global Semi-electric Standing Wheelchair market size is expected to reach \$ 714.6 million by 2029, rising at a market growth of 3.8% CAGR during the forecast period (2023-2029).

The global medical device market is estimated to be US\$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for healthcare from an aging population, rising prevalence of chronic and infectious diseases, and expansion in emerging markets. The medical devices market plays an important role in the healthcare spending industry. The medical devices market is driven by several factors, mainly including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, rising healthcare spending, and increasing awareness for early disease diagnosis and treatment, among others.

A wheelchair is a chair with wheels that replaces walking aids for people with reduced mobility. The main users are usually the wounded, the sick, the disabled, the elderly, etc., so that they can go out for activities. Children with disabilities do not buy large wheelchairs, and they are prepared not to buy them in the future, because the spine of large wheelchairs will cause scoliosis in children with disabilities. Wheelchairs not only meet the needs of the physically disabled and those with reduced mobility, but more importantly, facilitate family members to promote and take care of the disabled, enabling them to use wheelchairs for physical exercise and participation in social activities.
