According to our (Global Info Research) latest study, the global Semi shading Coated Fabric market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Semi-shading coated fabric products are made of polyester fiber as the main raw material to form the base fabric. The base fabric is then impregnated or coated on both sides with a water-based acrylic emulsion to achieve a sunshade effect of 50% to 90%. The main feature of this type of product in terms of production technology is that the fabric is impregnated or coated with a single layer after weaving. According to the different types of production processes, it can be divided into double-sided slurry scraping process and slurry dipping process. This type of product has the characteristics of blocking sunlight and transmitting visible light, while retaining the natural texture and pattern of the fabric to a certain extent.
