According to our (Global Info Research) latest study, the global Semi-Submersibles Transport Ship market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The semi-submersible transport ship can submerge the loading deck into the water through the adjustment of its own ballast water, and float the specific cargo to be carried from the designated position onto the loading deck of the semi-submersible ship to realize cargo transportation. The semi-submersible ship has a deep draft, is not easily affected by sea waves, and has excellent stability. It can be used as an offshore working platform, and it is also a special marine ship for transporting large and inseparable equipment (such as drilling platforms, ships, submarines, barges, and gantry cranes, etc.).
