According to our (Global Info Research) latest study, the global Semi-synthetic Metal Forming Fluid market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Semi-synthetic metal forming fluid (also known as semi-synthetic metalworking fluid) is a type of lubricant used in metalworking processes, such as forming, stamping, drawing, and rolling. It is designed to provide lubrication and cooling to prevent friction and heat during these processes. Semi-synthetic metal forming fluid is a combination of synthetic and mineral oil base fluids. It contains additives to enhance its performance, such as corrosion inhibitors, anti-foaming agents, and extreme pressure (EP) additives. These additives improve the lubricating properties of the fluid, increase its resistance to rust and oxidation, and help in extending tool life.
