The global Semi-synthetic Metal Forming Fluid market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Semi-synthetic metal forming fluid (also known as semi-synthetic metalworking fluid) is a type of lubricant used in metalworking processes, such as forming, stamping, drawing, and rolling. It is designed to provide lubrication and cooling to prevent friction and heat during these processes. Semi-synthetic metal forming fluid is a combination of synthetic and mineral oil base fluids. It contains additives to enhance its performance, such as corrosion inhibitors, anti-foaming agents, and extreme pressure (EP) additives. These additives improve the lubricating properties of the fluid, increase its resistance to rust and oxidation, and help in extending tool life.

This report studies the global Semi-synthetic Metal Forming Fluid production, demand, key manufacturers, and key regions.
