Semi-synthetic β -lactam antibiotics refer to β -lactam antibiotics produced by combining chemical synthesis with natural antibiotic molecules. These antibiotics include penicillins and cephalosporins, characterized by their β -lactam ring structure. They are typically synthesized using naturally derived 6-aminopenicillanic acid (6-APA) or 7-aminocephalosporanic acid (7-ACA) as starting materials, which are chemically modified by adding different side chains to create antibiotics with specific antibacterial spectrums. Common semi-synthetic β -lactam antibiotics include amoxicillin, cephalexin, and others.
