Abstracts

The growth of the translucent concrete industry is due to the use of environmentally friendly building materials and the need for aesthetic products for construction. When used as a building material, translucent concrete allows sunlight to pass through it easily, thus helping to save electricity during the day. It also has outstanding aesthetic characteristics and can also be used for indoor applications in commercial and residential buildings. Translucent concrete is made from two main types of raw materials, concrete and optical elements. The concrete material provides strength to the final product when in use.
