Abstracts

The global Semiconductor Bonding Equipment market size is expected to reach $ 7115 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

Semiconductor Bonding Equipment refers to dedicated manufacturing systems that align, place and form temporary or permanent connections between two semiconductor wafers, a device wafer and a temporary carrier, a singulated semiconductor die and a wafer, or a semiconductor die and a package substrate. These systems typically integrate wafer or die handling, optical recognition, micron- or submicron-level alignment, force and temperature control, vacuum or controlled-atmosphere processing, surface preparation, process monitoring and factory automation interfaces. Major product categories include permanent and temporary wafer bonders, wafer-to-wafer hybrid bonding systems, die-to-wafer bonders, conventional die attach systems, flip-chip bonders, thermo-compression bonders and sintering die attach equipment. The defining criterion is that the equipment directly performs the bonding operation, irrespective of whether it is installed in a front-end, wafer-level packaging or back-end assembly environment.

By bonding object, the market consists of wafer-level, die-to-wafer and die-to-substrate bonding equipment. Wafer-level equipment primarily comprises permanent wafer-to-wafer bonders and temporary wafer-to-carrier systems serving image sensors, MEMS, thin-wafer processing and wafer-level 3D integration. Die-to-wafer platforms can be divided into sequential and collective architectures and are increasingly used for known-good-die integration, chiplets and heterogeneous packaging. Die-to-substrate equipment covers adhesive and DAF die bonders, eutectic and soft-solder die attach systems, flip-chip bonders, chip-to-substrate thermo-compression bonders and power-

info@marketpublishers.com

semiconductor sintering systems. The three groups differ materially in bonding area, alignment requirements, throughput model, thermal budget and handling architecture: wafer-to-wafer tools emphasize particle, warpage and full-wafer uniformity control; die-to-wafer tools emphasize selective placement accuracy and thin-die handling; and die-to-substrate systems emphasize throughput, material flexibility and package cost.

From a technology perspective, the industry is expanding from established adhesive, eutectic, solder and anodic processes toward low-temperature direct bonding, thermo-compression bonding and hybrid bonding. TCB remains an important high-volume process for advanced logic, HBM and selected 2.5D packages because it can process microbumps and copper pillars with controlled force and localized thermal management. Hybrid bonding combines dielectric direct bonding with metal-to-metal interconnection and offers a longer-term pathway toward smaller interconnect pitch, higher bandwidth density and lower interconnect energy. Nevertheless, anodic, glass-frit and eutectic wafer bonding will remain important for MEMS, sensors and hermetic devices, while adhesive, DAF, solder and sintering technologies will continue to serve mainstream IC and power-semiconductor packaging. The market is therefore expected to remain technologically diversified rather than converge on a single universal bonding process.

AI processors, high-bandwidth memory, chiplets and 2.5D/3D integration are expected to generate the largest incremental equipment value over the next several years. Higher HBM stack counts, larger compound logic dies and shrinking interconnect pitch are increasing requirements for D2W TCB, C2S TCB and hybrid bonding systems, particularly in alignment accuracy, bond-force control, thin-die handling and real-time process monitoring. CMOS image sensors and MEMS continue to provide a stable base for wafer-to-wafer direct, anodic and hermetic bonding. SiC, IGBT and high-power modules support demand for soft-solder, eutectic and silver- or copper-sintering die attach systems, while silicon photonics, co-packaged optics, laser devices and RF components require high-accuracy die placement and low-temperature flip-chip bonding.

The supply structure varies significantly by product segment. European suppliers have a particularly strong position in wafer-level bonding, with EV Group and SUSS offering broad portfolios spanning permanent, temporary, wafer-to-wafer and die-to-wafer hybrid bonding. Die attach and advanced TCB markets are more broadly contested by ASMPT, Besi, Japanese equipment companies and specialized Asian assembly-equipment suppliers. European vendors are differentiated by surface preparation, vacuum processing, wafer alignment, cluster integration and hybrid bonding expertise,

+357 96 030922
info@marketpublishers.com

while Japanese suppliers have long-standing capabilities in high-throughput die attach, eutectic bonding and flip-chip assembly. Demand in South Korea and Taiwan is concentrated in HBM, memory, foundry and advanced OSAT investment, whereas Southeast Asia remains an important manufacturing base for conventional and higher-end die-to-substrate assembly. Mainland China has developed emerging suppliers of W2W, C2W, hybrid bonding, TCB and multi-chip die attach equipment, although customer qualification, high-volume installed base and process-data accumulation remain important development priorities.

The semiconductor bonding equipment industry is evolving from conventional back-end placement machinery into high-precision heterogeneous-integration platforms. Competition is shifting from isolated bond-head performance, positioning accuracy and units per hour toward integrated capabilities covering surface cleaning and activation, alignment, bonding, in-line metrology, yield feedback and automated material handling. ASMPT reported that its TCB revenue increased by approximately 146% in 2025 and raised its estimated TCB addressable market to US$1.6 billion by 2028. Besi also reported a significant increase in hybrid bonding bookings in the first quarter of 2026, indicating that advanced bonding is moving from process qualification into broader capacity deployment. Key trends include convergence of W2W and D2W platforms, migration of TCB toward finer-pitch and fluxless processing, expansion of hybrid bonding from image sensors into advanced logic and memory, increasing use of submicron and approximately 100-nanometer-class alignment, improved thin-die and warpage control, and deeper equipment integration with MES, AMHS and process-control systems. Primary growth drivers include AI computing, HBM, chiplets, 3D ICs, advanced-packaging capacity expansion, power-semiconductor demand and regional semiconductor supply-chain localization.

Report Scope

This report studies the global Semiconductor Bonding Equipment production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Semiconductor Bonding Equipment and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Semiconductor Bonding Equipment that contribute to its increasing demand across many markets.

Highlights and key features of the study

+357 96 030922
info@marketpublishers.com

Global Semiconductor Bonding Equipment total production and demand, 2021-2032, (Unit)

Global Semiconductor Bonding Equipment total production value, 2021-2032, (USD Million)

Global Semiconductor Bonding Equipment production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Unit), (based on production site)

Global Semiconductor Bonding Equipment consumption by region & country, CAGR, 2021-2032 & (Unit)

U.S. VS China: Semiconductor Bonding Equipment domestic production, consumption, key domestic manufacturers and share

Global Semiconductor Bonding Equipment production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Unit)

Global Semiconductor Bonding Equipment production by Bonding Object, production, value, CAGR, 2021-2032, (USD Million) & (Unit)

Global Semiconductor Bonding Equipment production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Unit)

This report profiles key players in the global Semiconductor Bonding Equipment market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include EV Group (EVG), Tokyo Electron Limited (TEL), SUSS MicroTec, Canon Anelva, Nidec Machine Tool, Bondtech, ASMPT Ltd, Besi, Shibaura Mechatronics, Applied Materials, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Semiconductor Bonding Equipment market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Unit) and average price (K USD/Unit) by manufacturer, by Bonding Object, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

Key Questions Answered:

1. How big is the global Semiconductor Bonding Equipment market?
2. What is the demand of the global Semiconductor Bonding Equipment market?
3. What is the year over year growth of the global Semiconductor Bonding Equipment market?
4. What is the production and production value of the global Semiconductor Bonding Equipment market?
5. Who are the key producers in the global Semiconductor Bonding Equipment market?
6. What are the growth factors driving the market demand?

Contents

1 SUPPLY SUMMARY

1.1 Semiconductor Bonding Equipment Introduction
1.2 World Semiconductor Bonding Equipment Supply & Forecast
  1.2.1 World Semiconductor Bonding Equipment Production Value (2021 & 2025 & 2032)
  1.2.2 World Semiconductor Bonding Equipment Production (2021-2032)
  1.2.3 World Semiconductor Bonding Equipment Pricing Trends (2021-2032)
1.3 World Semiconductor Bonding Equipment Production by Region (Based on Production Site)
  1.3.1 World Semiconductor Bonding Equipment Production Value by Region (2021-2032)
  1.3.2 World Semiconductor Bonding Equipment Production by Region (2021-2032)
  1.3.3 World Semiconductor Bonding Equipment Average Price by Region (2021-2032)
  1.3.4 North America Semiconductor Bonding Equipment Production (2021-2032)
  1.3.5 Europe Semiconductor Bonding Equipment Production (2021-2032)
  1.3.6 China Semiconductor Bonding Equipment Production (2021-2032)
  1.3.7 Japan Semiconductor Bonding Equipment Production (2021-2032)
  1.3.8 South Korea Semiconductor Bonding Equipment Production (2021-2032)
  1.3.9 China Taiwan Semiconductor Bonding Equipment Production (2021-2032)
1.4 Market Drivers, Restraints and Trends
  1.4.1 Semiconductor Bonding Equipment Market Drivers
  1.4.2 Factors Affecting Demand
  1.4.3 Semiconductor Bonding Equipment Major Market Trends

2 DEMAND SUMMARY

2.1 World Semiconductor Bonding Equipment Demand (2021-2032)
2.2 World Semiconductor Bonding Equipment Consumption by Region
  2.2.1 World Semiconductor Bonding Equipment Consumption by Region (2021-2026)
  2.2.2 World Semiconductor Bonding Equipment Consumption Forecast by Region (2027-2032)
2.3 United States Semiconductor Bonding Equipment Consumption (2021-2032)
2.4 China Semiconductor Bonding Equipment Consumption (2021-2032)
2.5 Europe Semiconductor Bonding Equipment Consumption (2021-2032)

I would like to order

Product name: Global Semiconductor Bonding Equipment Supply, Demand and Key Producers, 2026-2032

Product link: https://marketpublishers.com/r/G5A6B7D9F855EN.html

Price: US$ 4,480.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page https://marketpublishers.com/r/G5A6B7D9F855EN.html
