According to our (Global Info Research) latest study, the global Semiconductor Electroplated Blades market size was valued at US\$ 61.4 million in 2024 and is forecast to a readjusted size of USD 104 million by 2031 with a CAGR of 6.9% during review period.

Semiconductor electroplated blades are precision cutting tools used in the semiconductor industry for dicing or slicing semiconductor wafers into individual chips or dies. These blades are made by electroplating abrasive materials—typically diamond particles—onto a metal core, creating a thin, durable cutting edge. The electroplating process allows for precise control over the distribution and bonding of the abrasive particles, resulting in blades that offer high cutting accuracy, minimal chipping, and reduced kerf loss. They are widely used in applications involving hard and brittle materials such as silicon, sapphire, and gallium arsenide.
