Abstracts

According to our (Global Info Research) latest study, the global Semiconductor Laser Cutting Machine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Laser cutting replaces traditional mechanical knives with invisible beams. It has the characteristics of high precision, fast cutting, not limited to cutting pattern restrictions, automatic typesetting to save materials, smooth incisions, and low processing costs. The semiconductor laser cutting machine is to focus the laser emitted from the laser into a high power density laser beam through the optical path system. The laser beam is irradiated on the surface of the workpiece, making the workpiece reach the melting point or boiling point, while the high-pressure gas coaxial with the beam blows the molten or vaporized metal away. With the movement of the relative position of the beam and the workpiece, the material is finally formed into a slit, so as to achieve the purpose of cutting.

Chinese top five manufacturers of Semiconductor Laser Cutting Machine occupied for a share over 60 percent, key players are DISCO, Han's Laser Technology, Wuhan Huagong Laser, ASMPT and Tokyo Seimitsu Co., Ltd., etc.
