The use of lasers in the healthcare sector has proved to be a boon for both the semiconductor and medical industries. Lasers are used in medical treatment areas such as cosmetic dermatology for skin resurfacing, scar revision, tattoo removal, and laser hair removal; lithotripsy; ophthalmology; cancer treatment; dermatology; and general surgery for tissues.

Scope of the Report:

This report studies the Semiconductor Laser Treatment market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Semiconductor Laser Treatment market by product type and applications/end industries.

This market research and analysis estimates that the aesthetics/cosmetics segment will account for more than 40% of the total share of the market and dominate this industry. Laser-based aesthetics are used for a wide range of applications such as in pigmentary treatments, acne, and rejuvenation applications, and also in skin tightening. The growing aesthetic consciousness among patients and the rapidly increasing demand for energy-based aesthetic products will drive the growth of this market segment in the coming years.

The Americas accounted for almost 45% of the total share of the semiconductor laser treatment market. The US is one of the major contributors in this region. This mainly attributes to the availability of a large number of skilled surgeons trained on advanced

medical laser equipment and also to the approval of the FDA towards the use of aesthetic lasers. Advancements in laser technologies and the increasing adoption of Lasik treatment will fuel the growth of the market in this region during the predicted period.
