## Abstracts

Semiconductor mold rubber cleaning sheet, also known as mold cleaning film, is a rubber synthetic material specially used for cleaning semiconductor molds. It is mainly used in the plastic packaging process of epoxy resin transfer molding of semiconductor integrated circuits, semiconductor discrete devices and semiconductor optoelectronic devices.

According to our (Global Info Research) latest study, the global Semiconductor Mold Rubber Cleaning Sheet market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The main function of the semiconductor mold rubber cleaning sheet is to remove resin residue, organic oxides and other contaminants generated in the mold cavity, mold surface, etc. during the continuous encapsulation process of epoxy resin. These contaminants may affect the quality of the encapsulation. Compared with traditional mold cleaning methods, the use of semiconductor mold rubber cleaning sheets can greatly shorten the cleaning time and reduce the consumption of lead frames or paper frames, thereby improving production efficiency and reducing costs. Semiconductor mold rubber cleaning tablets have excellent cleaning effect and durability, and can clean residues on the mold surface efficiently and quickly without causing damage to the mold. In addition, it is environmentally friendly and non-toxic, and meets the environmental protection and safety requirements of modern industry.
