Abstracts

Semiconductor packaging is carried out to provide extra protection to wafers or substrates. The package casing is made up of materials such as metal, plastic, glass, or ceramic and contains one or more semiconductor electronic components.

Scope of the Report:

This report focuses on the Semiconductor Packaging Equipments in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Accounting for more than 55% of the total market shares, the die-level packaging equipment segment dominated the market. This growth can be attributed to the increasing demand for application processors, basebands, and SoCs, which are integrated into mobile and consumer electronic devices. Though the market shares of this segment will decline due to the use of advanced technologies, this segment will continue to dominate the market throughout the forecast period.

According to this market study, the OSATs will account for more than 58% of the total market shares and will also dominate the semiconductor packaging equipment market throughout the predicted period. The migration of a number of semiconductor manufacturers to the fabless model is identified to be the major factor for the growth of the market segment. Additionally, the development of new technologies such as FOWLP, 2.5D, and TSV has also increased the outsourcing of back-end processes, which will also fuel the growth of this market segment.

The worldwide market for Semiconductor Packaging Equipments is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
