## Abstracts

According to our (Global Info Research) latest study, the global Semiconductor Packaging Mold Cleaning Sheet market size was valued at US\$ 309 million in 2025 and is forecast to a readjusted size of US\$ 504 million by 2032 with a CAGR of 7.2% during review period.

Semiconductor packaging mold cleaning sheets are solid cleaning tablets that release active ingredients after dissolving in a suitable cleaning medium to remove resin residue, flux residue, and fine contaminants from the surface of packaging molds, thereby improving mold cleaning effectiveness and production yield. Global sales of these cleaning sheets are projected to reach approximately 120 million units by 2025, with an average price of approximately US\$2.50 per sheet and a capacity utilization rate of approximately 76%. The upstream and downstream companies belong to the fine chemical raw material supply and cleaning agent formulation R&D and manufacturing sectors, and the semiconductor equipment and mold manufacturing sectors, respectively. The industry's average gross profit margin is approximately 30%. In the product cost structure, effective chemical raw materials account for approximately 40% of the total cost, additives and molding auxiliaries account for approximately 25%, packaging and quality inspection account for approximately 15%, and the remainder is for R&D, design, management, and sales expenses. On the demand side, the downstream demand list includes packaging mold cleaning sheets, customized dissolving cleaning agents, fast cleaning sheets, and high-efficiency decontamination combination packages. The downstream customer list covers back-end packaging companies, testing and packaging plants, wafer foundry packaging workshops, and large semiconductor manufacturing service providers. In terms of business opportunities, policy-driven factors are reflected in the increased support from various

countries for low-emission and pollution-free cleaning products, as well as the requirements for promoting independent and controllable semiconductor manufacturing and green and clean production. Technological innovation is driven by the increasingly mature development of more efficient and environmentally friendly solid cleaning formulas, rapid dissolution technologies, and automated cleaning systems. Meanwhile, changes in consumer and end-user demand are reflected in the higher requirements for cleaning accuracy and consistency placed on advanced packaging and wafer-level packaging, driving the upgrading of cleaning wafers towards high performance and customization.
