## Abstracts

According to our (Global Info Research) latest study, the global Semiconductor Process Tapes market size was valued at USD 1119.5 million in 2023 and is forecast to a readjusted size of USD 2084 million by 2030 with a CAGR of 9.3% during review period.

Surfactants are chemical products consumed in large quantities every day on a worldwide scale. The development of less irritant, less toxic, consumer-friendly surfactants is, therefore, of general interest. Amino-acid-based surfactants constitute a novel class of surfactants produced from renewable raw materials and can be seen as an alternative to conventional surfactants.

In the report, we cover amino acid surfactants data by actual data instead of concentration conversion. Since amino acid surfactants have too many product forms and types, it may not be appropriate to convert by 30% solution or 100% active ingredient. Most amino acid surfactants solution has an active ingredient of 30-50%, and solid amino acid surfactants typically have an active ingredient of over 95%.

Global Semiconductor Process Tapes key players include Mitsui Chemicals Tohcello, Lintec and Denka, holding a share over 50%. China is the largest market, with a share about 24%, followed by North America and Japan. In terms of application, the largest application is back-grinding, followed by cutting. As for the types of products, it can be divided into UV tape and Non-UV tape. Non-UV tape is the largest segment, with a share over 53%.

The Global Info Research report includes an overview of the development of the Semiconductor Process Tapes industry chain, the market status of Back-grinding (UV

Tape, Non-UV Tape), Cutting (UV Tape, Non-UV Tape), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Semiconductor Process Tapes.

Regionally, the report analyzes the Semiconductor Process Tapes markets in key regions.
