Abstracts

The global Semiconductor Strain Gauge Sensors market size is expected to reach \$ 55.31 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

As opposed to other types of strain gages, semiconductor strain gages depend on the piezoresistive effects of silicon or germanium and measure the change in resistance with stress as opposed to strain. The semiconductor bonded strain gage is a wafer with the resistance element diffused into a substrate of silicon. It is widely used as sense element for transducer manufacturing and engineering stress analysis, Semiconductor Strain Gauges are not only used for surveying stress distribution, or static measurement for machinery, ships, bridges, aviation, but also used for non-linearity compensation of force transducers.

BCM SENSOR TECHNOLOGIES, Micron Instrument, Kyowa Electronic Instruments and HT SENSOR TECHNOLOGY are the leaders of the Semiconductor Strain Gauge Sensors industry, which take about 50% market share. Europe is the major region of the global market, which takes about 35% market share.
