Semiconductor test systems are part of the global test and measurement system market. They are used to inspect, evaluate, and test a device under test (DUT). Semiconductor test systems can be used to test a wide range of electronic devices, including components such as resistors, capacitors, and inductors; printed circuit boards (PCBs); ICs; and complex assembled electronic systems.

Scope of the Report:

This report focuses on the Semiconductor Test Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Semiconductor chips are used in various applications in the defense segment such as military and commercial aviation, ground tactical and other defense applications, and industrial and space flight programs as semiconductor test systems enable in achieving precision and accuracy. The increased spending from the governments of various countries towards the defense sector increases the market's revenue potential from this segment. This market research study estimates that the defense segment will account for the major shares of this global market throughout the forecast period.

APAC will be the major revenue contributor to the semiconductor test systems market throughout the forecast period. The presence of several original equipment manufacturers (OEMs) for smartphones, tablets, and computers will be a major factor influencing the growth of the market in this region.

The worldwide market for Semiconductor Test Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
