## Abstracts

Semiconductor UV tape, UV-release tape, is a specialized adhesive tape used in semiconductor manufacturing processes, particularly in the fabrication of semiconductor devices such as integrated circuits (ICs) and microelectromechanical systems (MEMS). UV tape is designed to temporarily bond semiconductor wafers or substrates to a carrier during various processing steps, such as wafer dicing, thinning, packaging, and handling.

According to our (Global Info Research) latest study, the global Semiconductor UV Tape market size was valued at US\$ 483 million in 2023 and is forecast to a readjusted size of USD 833 million by 2030 with a CAGR of 7.2% during review period.

The semiconductor industry is witnessing a shift towards advanced packaging technologies such as fan-out wafer-level packaging (FOWLP), 3D integrated circuits (ICs), and system-in-package (SiP) solutions. These packaging techniques require precise handling and temporary bonding of semiconductor wafers during various processing steps, driving the demand for semiconductor UV tape.
