According to our (Global Info Research) latest study, the global Semiconductor Wafer Dicing Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The semiconductor wafer dicing machine divides the wafer containing many chips into wafer particles. The quality and efficiency of cutting directly affect the quality and production cost of chips. Semiconductor wafer dicing machine mainly includes grinding wheel dicing machine and laser dicing machine. Grinding wheel dicing machine is a precision numerical control equipment that integrates technologies such as water, gas, electricity, air static pressure high-speed spindle, precision mechanical transmission, sensors and automatic control. It is characterized by low cutting cost and high efficiency, and is suitable for cutting thicker wafers. The laser scribing machine uses a high-energy laser beam to irradiate the surface of the workpiece, so that the irradiated area is partially melted and vaporized, so as to achieve the purpose of scribing. It is characterized by high cutting precision and fast cutting speed, and is suitable for cutting thinner wafers.
