## Abstracts

According to our (Global Info Research) latest study, the global Semiconductor Wafer Electrostatic Chucks for 300mm Wafer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Electrostatic chuck, has been widely used in semiconductor process in plasma and vacuum environment, such as etching, chemical vapor deposition, ion implantation, etc. The advantages of this technology lie in its improvement of yield, no edge elimination effect of wafer, good wafer holding uniformity, controllable temperature, etc. A typical electrostatic chuck clamping system is a sandwich structure consisting of three parts: dielectric adsorption layer, electrode layer, and base layer. The three parts are stacked in the electrostatic chuck in a layered structure. From the surface to the base, they are dielectric adsorption layer, electrode layer, and base layer. Compared with traditional mechanical chuck and vacuum chuck, electrostatic chuck has many advantages. Therefore, electrostatic chuck has replaced the traditional mechanical chuck and vacuum chuck, and is widely used in integrated circuit manufacturing process. This report studies the semiconductor wafer electrostatic chuck for 300mm wafer.
