According to our (Global Info Research) latest study, the global Sensor-based Gun Systems market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Sensor-based gun systems are feasible as well as economical for the areas of strategic importance. Automatic gun targeting systems can use both active infrared (IR) or passive IR (PIR) sensors for target detection.

Sensor-based turret guns or sentry gun systems occupied majority share in the market. These guns are operated from a location that enables protection and improved visibility to the personnel, which has increased their preference among the defense forces. The use of sensors in these gun systems allows the replacement of human counterparts in demilitarized areas, as these can independently aim and fire at targets. Owing to the growing concern for securing international borders, many countries are developing innovative unmanned systems, which will increase the procurement of such sensor-based turret guns during the forecast period.
