Abstracts

The global Sensor-Based Ore Sorting market size is expected to reach \$ 1318.2 million by 2029, rising at a market growth of 9.4% CAGR during the forecast period (2023-2029).

In the future, the Sensor-Based Ore Sorting process may be favored by more mineral processing plants because this process can increase production capacity and reduce production costs while making use of previously low-economic benefits and low-grade ores. In addition, this process can also separate different ore types to achieve selective sorting.

Sensor-Based Ore Sorting is a method of classifying and selecting ores through the use of sensor technology, with the goal of optimizing resource utilization by removing waste, low-grade ore and improving concentrate quality.

This report studies the global Sensor-Based Ore Sorting demand, key companies, and key regions.
