The global Sensor System of Full Automated Guided Vehicle market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

AGV is the abbreviation of Automated Guided Vehicle (Automated Guided Vehicle). It refers to automatic guidance equipment such as magnetic strips, tracks or lasers, driving along a planned path, powered by batteries, and equipped with safety protection and various auxiliary equipment. Unmanned automated vehicles for institutions (e.g. transfer, assembly institutions). Usually multiple AGVs and control computers (consoles), navigation equipment, charging equipment and peripheral auxiliary equipment form the AGV system. The main working principle is that under the monitoring and task scheduling of the control computer, the AGV can accurately follow the prescribed path. After arriving at the designated position of the task, a series of tasks are completed, and the control computer can decide whether to go to the charging area for automatic charging according to the AGV's own power. The automatic guided vehicle is one of the important equipment of the unmanned workshop, and it is also an important symbol of the advanced productivity and intelligence of industrial manufacturing and logistics enterprises.
