The global Sensory Light Up Blanket market size is expected to reach \$ 254 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

A sensory light-up blanket is a type of weighted blanket that is designed to provide sensory stimulation and comfort to individuals with sensory processing disorders, anxiety, and other conditions. It typically has small LED lights embedded in the blanket that can change color and pattern, providing a calming visual effect. In 2025, global Sensory Light Up Blanket production reached approximately 4133 k units, with an average global market price of around 40 US\$/Unit. The production capacity of Sensory Light Up Blanket reaches 5100 k units, and the industry's gross profit margin is approximately between 30% and 50%.

The growing market demand for sensory light-up blankets is driven by multiple factors, including increased attention to mental health, greater reliance on non-pharmacological interventions in special education and rehabilitation, the rise of smart homes and immersive healing spaces, and improved product safety and interactivity resulting from the maturity of flexible electronics and smart textile technologies. At the same time, consumers' emphasis on stress reduction, sleep aid, mood regulation, and parent-child interaction experiences is also driving the rapid penetration of this product from professional medical settings into the mass family consumer market.
