According to our (Global Info Research) latest study, the global Separating Tank market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Separating tanks are primarily used to separate oil and water. It is also called a grease trap or a gasoline trap. Oil and water are separated using the difference in specific gravity. Due to the difference in specific gravity, oil floats against water, and the floating oil is adsorbed using adsorption mats. In addition, by separating the tanks with shielding plates and passing them through in sequence, the amount of oil can be gradually reduced while also removing foreign matter, etc.
