## Abstracts

According to our (Global Info Research) latest study, the global Sepsis Treatment market size was valued at USD 3450 million in 2023 and is forecast to a readjusted size of USD 5330.2 million by 2030 with a CAGR of 6.4% during review period.

Sepsis is usually treated with intravenous fluids and antibiotics. Typically, antibiotics are given as soon as possible. Often, ongoing care is performed in an intensive care unit. If fluid replacement is not enough to maintain blood pressure, medications that raise blood pressure may be used. Mechanical ventilation and dialysis may be needed to support the function of the lungs and kidneys, respectively. To guide treatment, a central venous catheter and an arterial catheter may be placed for access to the bloodstream. Other measurements such as cardiac output and superior vena cava oxygen saturation may be used. People with sepsis need preventive measures for deep vein thrombosis, stress ulcers and pressure ulcers, unless other conditions prevent such interventions. Some might benefit from tight control of blood sugar levels with insulin. The use of corticosteroids is controversial, with some reviews finding benefit, and others not.

Market competition is intense. Pfizer, NCPC, Bayer, Shanghai Pharmaceuticals, Johnson & Johnson, Novartis, GlaxoSmithKline etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers; with the development of society and the changing of consumer demand, there will be more companies enter this industry.
