## Abstracts

A Septic Air Pump works by pumping oxygen into the tank changing it from an anaerobic atmosphere to an aerobic atmosphere and this allows the more effective aerobic bacteria to exist in the tank. Under these conditions the treatment in the tank is increased and effluent leaving the tank can be cleaner which in turn takes the load off the soil treatment area.

According to our (Global Info Research) latest study, the global Septic Air Pumps market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

In terms of application, Municipal Wastewater Treatment Plants has a share about 60 percent.
