## Abstracts

According to our (Global Info Research) latest study, the global Serial Attached SCSI Technology market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Serial Attached SCSI technology is designed to move data to and from computer storage devices such as hard drives and tape drives. It is a point-to-point serial protocol that replaces parallel SCSI. SCSI first appeared in enterprise data centers in the mid-1980s. SAS uses the standard SCSI command set. It is currently slightly slower than the eventual parallel SCSI implementation, but in 2009 it will double the current speed to 6Gbit/s. This will allow for higher data transfer speeds. The protocol is 'downward' compatible with second-generation SATA hard drives. These drives can be connected to a SAS backplane (controller), but SAS drives cannot be connected to a SATA backplane.
