Abstracts

The global Serial Attached SCSI Technology market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Serial Attached SCSI technology is designed to move data to and from computer storage devices such as hard drives and tape drives. It is a point-to-point serial protocol that replaces parallel SCSI. SCSI first appeared in enterprise data centers in the mid-1980s. SAS uses the standard SCSI command set. It is currently slightly slower than the eventual parallel SCSI implementation, but in 2009 it will double the current speed to 6Gbit/s. This will allow for higher data transfer speeds. The protocol is 'downward' compatible with second-generation SATA hard drives. These drives can be connected to a SAS backplane (controller), but SAS drives cannot be connected to a SATA backplane.

This report studies the global Serial Attached SCSI Technology demand, key companies, and key regions.
