## Abstracts

The global Serial Device Server market size is expected to reach \$ 460 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

A serial port server, also called a serial server or port redirector, is a device that transfers data between a computer serial port (COM port) and an Ethernet local area network (LAN). This makes it possible to use Ethernet in place of serial cables, minimizing workstation clutter and also allowing serial devices to be placed far away from the computers with which they are used.

Moxa, DIGI and Advantech are the leaders of the Serial Device Server industry, which take about 30% market share. China is the major region of the global market, which takes about 25% market share.

This report studies the global Serial Device Server production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Serial Device Server and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
