Abstracts

The global Serial EEPROM market size is expected to reach \$ 1618 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Serial EEPROM (Serial Electrically Erasable Programmable Read-Only Memory) is a type of non-volatile memory chip that uses serial bus interfaces such as I2C, SPI, or MicroWire. It retains data even when power is turned off and can be electrically erased and rewritten repeatedly (?1 million times). Its capacity typically ranges from 1 Kbit to 2 Mbit, and it is used to store small amounts of critical parameters (calibration values, IDs, configurations, etc.).

Key features: Serial interface (fewer pins), low power consumption, small size, and high reliability.

Differences from parallel EEPROM: Parallel EEPROM requires multiple address and data lines and has been phased out; Serial EEPROM requires only 2 to 4 lines, making it suitable for embedded systems and space-constrained applications.

In 2025, global Serial EEPROM sales reached 24,541 million units, with an average price of \$42.63 per thousand units.

Development Trends

Capacity Upgrade: The mainstream is shifting from ?16Kbit (accounting for 29%) to 64Kbit–256Kbit; the market share of capacities above 256Kbit has increased by 28% over the past two years.

Low Power Consumption + High Reliability: IoT and wearable devices drive nanoampere-level power consumption; demand for automotive-grade (AEC-Q100) and industrial-grade products is growing, with enhanced temperature resistance (-40°C to 125°C) and anti-interference capabilities.

Interface Convergence: The combination of I2C (low-cost) and SPI (high-speed) has become the mainstream, with some integrating Microwire to meet multi-system compatibility requirements.

Accelerated Substitution by Chinese Manufacturers: The market share of Chinese manufacturers (such as Jucheng, Fudan Micro, and Purun) is rapidly increasing.

Package Miniaturization: The proportion of WLCSP and ultra-thin BGA packages is rising, with penetration rates exceeding 45% in TWS and medical wearables.
