## Abstracts

According to our (Global Info Research) latest study, the global Serial Port USB Adapter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A serial port USB adapter or simply USB adapter is a type of protocol converter that is used for converting USB data signals to and from serial communications standards (serial ports). Most commonly the USB data signals are converted to either RS-232, RS-485, RS-422, or TTL-level UART serial data.

USB to serial adapters are commonly used to convert a modern computer's USB port to a traditional serial communication port such as RS-232. These adapters are still in demand in areas such as industrial control, embedded system development, serial debugging, and legacy device connectivity. As newer computers and devices gradually move away from traditional serial ports, the demand for USB-to-serial adapters is likely to increase as they provide a solution that is compatible with older devices. Advances in wireless communications technology may reduce the need for wired connections, including USB-to-serial adapters. However, for applications that require reliable connectivity and low latency, wired solutions are still preferred. As USB technology evolves, such as USB Type-C and USB 4, the adapter market is likely to adapt to these new standards and provide serial port adapters compatible with new USB interfaces. This market will continue to be driven by specific application needs and technologies driven by development.
