Abstracts

The global Serial Port USB Adapter market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

USB to serial adapters are commonly used to convert a modern computer's USB port to a traditional serial communication port such as RS-232. These adapters are still in demand in areas such as industrial control, embedded system development, serial debugging, and legacy device connectivity. As newer computers and devices gradually move away from traditional serial ports, the demand for USB-to-serial adapters is likely to increase as they provide a solution that is compatible with older devices. Advances in wireless communications technology may reduce the need for wired connections, including USB-to-serial adapters. However, for applications that require reliable connectivity and low latency, wired solutions are still preferred. As USB technology evolves, such as USB Type-C and USB 4, the adapter market is likely to adapt to these new standards and provide serial port adapters compatible with new USB interfaces. This market will continue to be driven by specific application needs and technologies driven by development.

A serial port USB adapter or simply USB adapter is a type of protocol converter that is used for converting USB data signals to and from serial communications standards (serial ports). Most commonly the USB data signals are converted to either RS-232, RS-485, RS-422, or TTL-level UART serial data.
