Abstracts

The global Serial Protocol Adapter market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A serial protocol adapter is a type of protocol converter that is used for converting USB data signals to and from serial communications standards (serial ports). Most commonly the USB data signals are converted to either RS-232, RS-485, RS-422, or TTL-level UART serial data. The older serial RS423 protocol is rarely used any more, so USB to RS423 adapters are less common.

This report studies the global Serial Protocol Adapter production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Serial Protocol Adapter, and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Serial Protocol Adapter that contribute to its increasing demand across many markets.
