According to our (Global Info Research) latest study, the global Serial to Fiber Optic Converters market size was valued at USD 401.7 million in 2022 and is forecast to a readjusted size of USD 571.6 million by 2029 with a CAGR of 5.2% during review period.

Serial to fiber converters, sometimes also called fiber optic modem (FOM), is a device which provides electrical to optical conversion of electronic communication and data signals for transmission using tactical fiber optic cable assemblies. The converter simultaneously receives incoming optical signals and converts them back to the original electronic signal allowing for full duplex transmission. Together with the tactical fiber optic cables, the converter provides a rugged, secure, and easy deployable optical link. The serial-to-fiber media converter is available in both single and multi-channel configurations and supports both point-to-point and multi-point configurations.

Industrial Ethernet networks demand extended reach for data transmission. Industrial Ethernet networks consist of multiple data terminal equipment (DTE) and data communication equipment (DCEs) integrated together. To transmit data from the DTE to DCEs, Ethernet-compliant transmission media such as copper cables, fiber optics cables, etc are utilized. In modern industrial Ethernet networks, fiber optics has become a highly preferred choice due to its efficiency, data security, transmission speed, and higher bandwidth, etc. Since data signals transmitted from the DTE are in electric form, electric-optical data conversion is required. For the data conversion, the media converters are utilized. The Ethernet network extension is often done to accommodate long distance data transmission requirements. To achieve the same, serial-to-fiber media converters are utilized.
