Abstracts

According to our (Global Info Research) latest study, the global Series Commutator Motors market size was valued at US\$ 2425 million in 2025 and is forecast to a readjusted size of US\$ 3409 million by 2032 with a CAGR of 5.0% during review period.

In 2025, global Series Commutator Motor production reached approximately 540.51 M Units, with an average global market price of around 4.36 USD per Unit.

An Series Commutator Motor (AC series motor) is a single-phase motor that can be driven by either alternating current (AC) or direct current (DC), hence it is also called a universal motor. AC series motors are always driven by AC power. When energized, the enameled wires wound around the stator core generate an electromagnetic field. The rotor's energized conductors, connected in series with the stator windings via a commutator, experience an Ampere force in this electromagnetic field, generating a torque that drives the rotor to rotate.

Series Commutator Motors have high starting torque and good low-speed performance. Driven by AC power, they are commonly used in electrical appliances requiring high power, high starting and low-speed torque, and powered by AC, such as high-powered corded vacuum cleaners and other household appliances, as well as power tools.

Series Commutator Motors, with their unique advantages of high starting torque, wide speed range, and AC/DC compatibility, precisely address the core pain points of power drive in numerous scenarios. Their powerful starting performance perfectly suits the needs of power tools and small traction equipment requiring instantaneous heavy-load starting, solving the problem of weak starting performance common in ordinary motors.

Their flexible speed control characteristics meet the adaptation requirements of household appliances such as vacuum cleaners and blenders for different operating speeds, compensating for the narrow speed range and insufficient operational stability of traditional motors. Furthermore, their AC/DC compatibility significantly improves the applicability of the equipment in complex power supply environments, lowering the design and application threshold for end products. Currently, the intelligent transformation of global manufacturing is driving the upgrading of demand for industrial automation equipment, while the high-end development of small household appliances and the rise of emerging smart hardware continue to release customized power demands, jointly constituting the core driving force for industry development. With the deep integration of material technology innovation and intelligent control modules, Series Commutator Motors will achieve breakthroughs in energy efficiency improvement, noise control and life extension, further consolidating its irreplaceable position in cost-sensitive, short-term, high-intensity operation scenarios. At the same time, it will continue to penetrate emerging fields such as smart homes and light industrial robots, showing stable and broad market growth potential along with the infrastructure construction and consumption upgrade process in emerging global markets.

The main structure of Series Commutator Motors includes a fan shroud, impeller, guide vane, support frame, rotor (including bearings, shaft, rotor core and windings, commutator), stator (including stator core and windings), carbon brush assembly, and housing. Downstream applications are primarily with home appliance and power tool manufacturers; typical users include LG, Panasonic, Deerma, and Ecovacs.

The single-line production capacity of Series Commutator Motors is significantly affected by factors such as automation level, product specifications, and process complexity, typically ranging from 10 to 20 million units. Industry gross margins are generally between 20% and 30%.
