In 2025, global Server Busbar Trunking Systems production reached approximately 800,000 meters, with an average global market price of around USD 1,200 per meter.

The gross profit margin of major companies in the industry is between 18.86%?34.75%.

In 2025, the global production capacity of Server Busbar Trunking Systems was approximately 1.05 million meters.

Server Busbar Trunking Systems are modular power distribution systems used in data centers and server rooms to deliver electrical power along rows of racks or high-density computing zones. They typically include enclosed busbars, tap-off units, joints, monitoring devices, insulation structures and protection systems. Compared with traditional cable distribution, they offer flexible expansion, faster installation, higher current density and easier power monitoring. The product is used in cloud data centers, AI server rooms, enterprise facilities and high-performance computing sites. The market excludes building-level busways, ordinary cables and rack-level internal busbars counted separately.

The industry chain includes copper or aluminum conductors, steel or aluminum enclosures, insulation materials, tap-off boxes, circuit protection devices, sensors,

monitoring units, connectors and coating materials. Midstream production covers conductor processing, enclosure fabrication, insulation assembly, module integration, electrical testing, thermal testing, protection verification and packaging. Downstream demand comes from data centers, AI computing facilities, telecom rooms, enterprise server rooms and colocation operators. Growth is driven by rack power density, data center expansion, modular electrical distribution, power monitoring and rapid deployment needs.
