According to our (Global Info Research) latest study, the global Server Network Cards market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In the network, if there is a computer without a network card, then this computer will not be able to communicate with other computers, and it will not get any services provided by the server. Of course, if the server does not have a network card, it cannot be called a server, so the network card is an essential device for the server, just like an ordinary PC (personal computer) must be equipped with a processor. The network card on the PC we usually see is mainly to connect the PC to the LAN (Local Area Network), and the server network card is generally used for the connection between the server and the switch and other network devices.
