According to our (Global Info Research) latest study, the global Serverless Hosting Services market size was valued at US\$ 615 million in 2025 and is forecast to a readjusted size of US\$ 894 million by 2032 with a CAGR of 5.5% during review period.

Serverless hosting is a cloud computing model where developers don't need to manage underlying servers. Instead, they simply deploy code or applications, and the cloud platform automatically handles resource allocation, scaling, and operations. Key features include pay-as-you-go billing, an event-driven architecture, and seamless integration with other cloud services.

Serverless architecture is becoming the mainstream paradigm for cloud-native and modern application development. With the convergence of edge computing and AI inference, serverless will expand deeply into more granular and lower-latency scenarios. Its 'pay-as-you-go' model will encourage more enterprises to use it for event-driven applications, significantly reducing cold start and idle costs. In the future, serverless will be further standardized and more tightly integrated with containers and microservices, driving the development paradigm towards higher levels of abstraction and automation, becoming a core cornerstone for building agile, low-cost digital businesses.
